Description

Many concert ticket sites lacked information on the venues and focused more on the event itself. Our application not only provides details of concert events it also gives specific including the venue's menu, parking availability and number of seats/seating type.

Features

- Managers can book events for their band.
- Venue owners can add details about their venue.
- Owner's of venues can add menus.

Planning - User Stories

As a user, I should be able to create an event with the following information: the name, date and time, price, genre, artist, and the venue that it will be held at.

As a user, I should be able to navigate to the event page and see the following information: event name, date and time, ticket price, genre, and artist performing.

Planning - Database

- Event
- Item
- Menu
- Menu-Items
- Venue
- Genre

Technology Stack

- Java
- SpringBoot
- Gradle
- Thymeleaf
- SQL
- Bootstrap

Demo

What I Learned

- Sharing work with multiple users via github.
- Dove deeper into css/html.

What's Next

- Search
- User Profiles
- Location Scripting
